Senior Cat Recommendations

The latest information available for cats suggests that older cats need more routine care and check ups than younger cats. Just like in humans, if we can examine your cat more frequently and run routine tests, we can catch common diseases that come up in cats as they age. Here are some examples:

Dental Disease
Diabetes
Hyperthyroidism
Renal Disease
Tumors

Routine Physical Exams are recommended every 6 months when the cat is 7 years or older. The cost for this exam is \$36.00.

A yearly senior wellness is also recommended and that will include the following tests:

Routine Annual Physical Exam
Full Chemistry (In house)
CBC
Complete Urinalysis
TT4 (Thyroid Testing)
Blood Pressure
Blood Sample Collection

Total Cost: \$187.00

The senior wellness check-up will be a 15% savings on the procedures from the normal costs. If you add these tests up separately, you could easily spend over \$220.00.

If your cat presents with symptoms or a problem arises in the blood work, we may want to do additional tests, such as x-rays. We will let you know in advance if this applies to your cat and you will be asked for permission to add these tests if they are necessary.

If you have additional questions, please don't hesitate to ask a receptionist or a doctor. We are always happy to help.
